

If a relevant fee has not been paid on filing an application or in the prescribed amount, the fee shall be paid within 15 days after delivery of a written notice of an administrative body. Payments of administrative fees shall be made by **money order** or **transfer** to the following bank account of the Industrial Property Office of the Slovak Republic:

Bank name:	State Treasury Radlinského 32 810 05 Bratislava
Name of the account:	Depozitný účet ÚPV SR BB
IBAN code:	SK49 8180 0000 0070 0006 0750
BIC code:	SPSRSKBA
Constant Symbol:	0558

Maintenance fees for Patents, European patents designated for the SR and Supplementary protection certificates shall be paid to the following bank account of the Industrial Property Office of the Slovak Republic:

Bank name:	State Treasury Radlinského 32 810 05 Bratislava
Name of the account:	Účet udržiavacích poplatkov ÚPV SR BB
IBAN code:	SK53 8180 0000 0070 0011 9169
BIC code:	SPSRSKBA
Constant Symbol:	0558

Fees for European patent applications shall be paid to the following bank account of European Patent Office:

Bank name:	Commerzbank AG Promenadeplatz 7 80273 Munchen
IBAN code:	DE20 7008 0000 0333 8800 00
BIC code:	DRESDEFF700

Variable symbol:

Variable symbol is always created of 10-digit number code. This code starts from the left side with 1-digit prefix **X** specifying relevant type of an application as follows:

- 0 PTO (topography application)
- 1 PP (patent application)
- 2 PUV (utility model application)
- 3 PCT (international patent application - PCT)
- 4 PDO (request for supplementary protection certificate)
- 5 PD (design application)
- 6 POZ (trademark application)
- 7 MOZ (proceedings on internationally registered trademark)
- 8 POP (application for designation of origin)
- 9 EP (translation of patent claims of European patent application, translation of European patent file and maintenance fees for European patent)

Prefix **X** is followed by 9-digit **number of an application/request, granted by the Office.**

In the case of **national applications/requests (prefixes: 0, 1, 2, 4, 5, 6, 8)** the number of an application/request shall have form: **n5 n4 n3 n2 n1 – YYYY**

Where: n5 n4 n3 n2 n1 - 5-digit code for upward line of numbers of the relevant application/request (starts with 00000 every year)

- 4-digit code for the year of filing of relevant application/request

When creating a variable symbol it is necessary to start from the number of the relevant application/request!

Variable symbol starts from the left with relevant prefix **X** followed by 5-digit code **n5 n4 n3 n2 n1** for upward line of numbers of the relevant application/request. This code is followed with 4-digit code **YYYY** for the year of filing of the relevant application/request.

Note: Code with less than 5 digits **n5 n4 n3 n2 n1** of an application/request shall be completed with zeros from the left. (E.g. number 21 shall be related to 5-digit code 00021, number 5011 shall be related to 5-digit code 05011.)

Number of a national application/request: **n5 n4 n3 n2 n1 – YYYY**

Variable symbol composition: **X n5 n4 n3 n2 n1 Y Y Y Y**

Notice:

In the case of registered federal trade marks the number of an application for entry of a trade mark into the Register does not contain the year of filing. In this case the variable symbol starts with the relevant prefix **6** for trade mark applications, the number of request follows from the right to the left and remaining positions shall be completed with zeros. See the table with examples.

In the case **of international applications PCT (prefix 3)** the number of an application shall be in the form: **PCT/ccYYYY/n6 n5 n4 n3 n2 n1**, where

cc - 2-digit code of the state of receiving office

YYYY - 4-digit code for the year of filing of the relevant application

n6 n5 n4 n3 n2 n1 - 6-digit code for upward line of numbers of relevant application

Variable symbol shall start from the left, in this case with prefix **3** followed by 5-digit code for upward line of numbers of the relevant application, for which only numbers on positions **n5 n4 n3 n2 n1** shall be used (i. e. without number on the position n6). Then 4-digit code **YYYY** for the year of filing of the relevant application follows.

Form of the number of international application PCT: **PCT/ccYYYY/ n6 n5 n4 n3 n2 n1**

Variable symbol composition: **3 n5 n4 n3 n2 n1 Y Y Y Y**

In the case of proceedings on **internationally registered trade marks (prefix 7)** the number of an international trade mark shall be in the form: **MOZ n6 n5 n4 n3 n2 n1**, where

n6 n5 n4 n3 n2 n1 - 6-digit code for upward line of numbers of relevant internationally registered trade mark

Variable symbol shall start from the left, in this case with prefix **7** followed by 6-digit code **n6 n5 n4 n3 n2 n1** for upward line of numbers of the relevant internationally registered trade mark from the right to the left and remaining positions shall be completed with zeros.

Form of the number of an internationally registered trade mark: **MOZ n6 n5 n4 n3 n2 n1**

Variable symbol composition: **7 0 0 0 n6 n5 n4 n3 n2 n1**

In the case of **translation of patent claims of European patent applications / translations of European patent files (prefix 9)** the number of an application after publication/the number of granted European patent shall be in the form:

EP n7 n6 n5 n4 n3 n2 n1, where

n7 n6 n5 n4 n3 n2 n1 - 7-digit code for upward line of numbers of relevant application after publication / of granted European patent

Variable symbol shall start from the left, in this case with prefix **9** followed by 7-digit code **n7 n6 n5 n4 n3 n2 n1** for upward line of numbers of the relevant application after publication/of granted European patent from the right to the left and remaining positions shall be completed with zeros.

Form of the number: **EP n7 n6 n5 n4 n3 n2 n1**

Variable symbol composition: **9 0 0 n7 n6 n5 n4 n3 n2 n1**

Examples:
